1. Disclaimer and Legend

The scope of engineering includes the following document deliverables.

The scope of engineering has been selected for this project. The scope can be adjusted by Customer request, and Metso will update the proposal or amend the contract accordingly.

Legend:

LOT1	1st Basic Engineering document batch, Flowsheet and Plot plan freeze
LOT2	2nd Basic Engineering document batch, Layout freeze
LOT3	3rd Basic Engineering document batch, Readiness for 30% review
LOT4	4th Basic Engineering document batch, Update after 30% review

IFI	Issued for Information
IFR	Issued for Review
IFA	Issued for Approval
AFD	Approved for Detail Engineering
AFC	Approved for Construction
PRE	Preliminary

Notes:

*	For Crushing Station, deliverable issued only for the whole station, not for individual equipment
**	For Crushing System, no deliverable will be issued

The amount of documents is indicative. Multiple documents can be combined into one.

Metso reserves the right to make minor updates or improvements to AFD-level documentation until the final Lot of Basic Engineering, for documents delivered as AFD in earlier Lots.

2. Basic Engineering Deliverables and Descriptions

DOCUMENT DELIVERABLE	CODE	LOT 1	LOT 2 Class 3	LOT 3 for 30%	LOT 4 after 30%	DOCUMENT DESCRIPTION
		'26.12.06	'27.02.07	'27.03.28	TBD	
A&B - GENERAL & ENGINEERING MANAGEMENT		Lot 1	Lot 2	Lot 3	Lot 4	
PROGRESS REPORT	ABB04	IFI, weekly				Purpose • Report weekly the status of the project Content • Main events • Status of the project • Areas of concern • Major targets for the next period
TIME SCHEDULE, ENGINEERING	ABD11	IFI				Purpose • Representation of basic engineering project main activities and their duration Content • Main activities and milestones, and their duration in bar chart form.
PROJECT COST ESTIMATE, CAPEX	ACA35			IFI		Purpose • Provides an estimate of the capital cost of the envisaged processing plant of the agreed scope, based on deliverables produced during the study in question. • Unless otherwise separately stated, expenses other than those directly related to the envisaged processing plant are not considered in the estimate. Such non-considered expenses include, but are not limited to, infrastructure, social premises, maintenance facilities, mining activities, tailings storage facility, soil survey and testing, earthwork, warehousing, logistics, communications, firefighting, licensing, permitting, royalties, and taxes. • The cost estimate will be made in accordance with Metso knowledge and experience and shall serve as a cost estimate for the envisaged plant, without prejudice. It is not an offer in any form. • Construction and installation cost excluded unless mentioned otherwise Content • Cost estimate based on AACE International Class 3 maturity level engineering documentation, with accuracy ranges typically -10...-20% / +10...+30% • The estimated value of the mechanical process equipment list by delivery packages • Budget proposals for selected process equipment • The total costs of electrification, instrumentation, and automation of the process, estimated using Metso's internal price lists and methods • The total costs of piping, and steel structures supporting the equipment, estimated using Metso's internal price lists considering local supply where applicable. • All other costs associated with the delivery of the envisaged processing plant of the agreed scope estimated using stochastic factored estimating techniques • Estimate of required remaining research, testwork, and engineering costs • Breakdown of total cost into equipment and major disciplines

General Notes

1. In order to facilitate the timely preparation of the AACE Class 3 Cost Estimate in March, DL recommends that the all LOT 3 Deliverables be made available as part of LOT 2.
2. The LOT 4 Deliverables are expected to be developed following the 30% Model Review and are therefore considered part of the Detailed Engineering phase. Accordingly, the scope, content, and timing of these deliverables shall be discussed and agreed upon at a later stage of the Project.

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

PROJECT COST ESTIMATE, OPEX	ACA35			IFI		Purpose • Provides an estimate of the operating costs of the envisaged processing plant of the agreed scope, based on deliverables produced during the study in question. • Unless otherwise separately stated, expenses other than those directly related to the envisaged plant are not considered in the estimate. Such non-considered expenses include, but are not limited to, infrastructure, social premises, maintenance facilities, mining activities, tailings storage facility, soil survey and testing, earthwork, warehousing, logistics, communications, firefighting, licensing, permitting, royalties, and taxes. • The cost estimate will be made in accordance with Metso knowledge and experience and shall serve as a cost estimate for the envisaged plant, without prejudice. It is not an offer in any form. • The estimate is provided only in conjunction with the estimated cost of capital of the envisaged plant (CAPEX). Content • Overall estimate of operating expenses in the envisaged processing plant of the agreed scope. • Energy consumption and required consumables and operating personnel are estimated according to the maturity and accuracy of the available engineering documentation and with the agreed unit prices.
PLANT, PLANT UNIT AND EQUIPMENT CODES PROCEDURE	BDB02	AFD				Purpose • Representation of plant, plant unit and equipment coding to be used in Engineering project documentation Content • Code Structure Numbering instructions • Equipment designation letters
DOCUMENT CODES PROCEDURE	ABD27	AFD				Purpose • Representation of document coding to be used in Engineering project documentation Content • Code structure • Discipline codes • Document types • File name
SITE CONDITIONS	BDB01	IFI				Purpose • Provide information on the site conditions to take into account in the engineering Content • Site location • Environmental conditions • Earthquake levels • Other data
HAZSCAN DOCUMENTATION	BQS06			AFD		Purpose • Hazscan Report summarizes the results of the Hazardous scenario analysis (Hazscan) which is a risk analysis performed at early stage of project by Metso Hazscan procedure. The purpose of Hazscan is to eliminate major risks already at early phase of project. The focus of this safety analysis is on technology related risks having human safety or environmental consequences. Content • Summary report of the Hazscan review • Hazcan worksheets including identified risks, their consequences and recommendations made by Hazscan team. Risk classification is done by Metso Risk matrix.
HAZOP DOCUMENTATION	MQS03				AFD	Purpose • Hazop Report summarizes the results of the Hazard and operability study (Hazop), which is a process risk analysis based on PI-diagrams of the plant. The report and action list is used as basis for risk mitigating actions. • Risks identified in hazop can be further classified based on Metso's risk matrix covering safety and environmental related risks Content • Summary report of the Hazop study • Hazop worksheets including identified deviations, causes and consequences and list of recommendations made by Hazop team • In Basic Engineering no LOPA will be included in HAZOP. 3rd party equipment packages will not be covered in BE HAZOP as no vendor data will be available.

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

SIL ALLOCATION DOCUMENTATION	MQS05				AFD	Purpose • SIL Allocation Documentation summarizes the results of the SIL analysis and is basis for further engineering regarding safety Content • Summary report of the SIL Allocation • SIL Allocation worksheets prepared during SIL analysis • SIL Allocation is done based on Metso's risk matrix covering safety and environmental relating risks.
P - PROCESS ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	
PROCESS DESIGN CRITERIA	PEC02	AFD				Purpose • Process Design Criteria includes basic information for project execution needed for process design. Content • Capacity of the plant • Characteristics of raw material (composition, particle size, moisture, solids content, specific gravity etc.) • Specification of products • Design parameters (if applicable)
PROCESS DESCRIPTION	PDB05		AFD			Purpose • Process description presents the process steps for the operation of the plant, gives basic information about the process to other disciplines and provides a basis for training the operating personnel and for operation of the plant. Content • Description of main process flows by processing areas or unit processes • Operating conditions and characteristics of process flows
MATERIAL BALANCE	PED07	PRE	AFD			Purpose • Material balances describe the process-related material flows Content • Names of material flows; raw materials, intermediate products and products • Balances and flow rates of the relevant components based on a relevant time period (annual, hourly etc.) • Main chemical composition of relevant streams • Characteristics of operating conditions
PROCESS FLOW DIAGRAMS	PFB01	IFA	AFD			Purpose • The Process flow diagram presents a process plant by means of graphical symbols, interconnected with flow lines. The graphical symbols represent equipment, and the lines represent mass or energy flows or energy carriers. The Process flow diagram is the basis for other disciplines and it provides essential information for training the operating personnel and running the plant. Content In its final stage it shall contain: • Principal equipment or unit operations. • All process equipment with equipment tag number and name. • Route of ingoing and outgoing material flows. Energy flows are also shown when applicable. • Battery limits between contractual parties. • Internal battery limits (e.g. for plant units, package units, etc.) . • After the Basic Engineering will not include details of 3rd party packages The process flow diagram is either complemented by separate Material Balance document (document code PED07) containing the stream table data or the stream tables are integrated into the Process flow diagram.

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

EQUIPMENT LIST	BPC01	IFR	AFD			Purpose • The document gives an overview on process equipment with names and main data which can be used as a basis for the cost estimation, scope definition with the customer and erection estimation. Content Brief description of the process equipment pertaining to a defined scope of planning based on essential technical data. The information in the document will be enriched during project execution. • Equipment tag (position) number • Equipment name • Quantity of equipment • Duty (if applicable) • Type • Capacity • Main dimensions (if applicable) • Materials of construction (when needed) • Rated power (e.g. motors) • Emergency power requirement
LIST OF UTILITIES AND CONSUMABLES	PEC04		AFD			Purpose • This document gives necessary information on the amounts and properties of utilities and consumables required by the process. The consumption figures can be presented according to types of consumables and utilities, or they can be divided for each plant area. The information is the basis for process and other disciplines engineering work. It also forms a basis for operation cost estimation. Content • List with consumption utilities and consumables as specified in relevant unit • Specification/Requirements for specific utilities and consumables can be attached when applicable
P&I LEGEND	PDB07	AFD				Purpose • P&I Diagram legend presents symbols and designations relating to PI-diagrams. It can be used in drafting as well as reading diagrams. Content • Standard set of symbols to be used in P&I Diagrams • Guidelines for designation of different elements. • Valves • Piping components • Instruments • Fluid codes • Line styles • Designation principles for equipment, pipes, valves, piping components, instrument loops and motors
P&I DIAGRAMS	PFB06		IFR	AFD		Purpose • Represents the technical realization of the process by means of graphical symbols for process equipment, piping and measurement and control functions. • Basis for further engineering of the subsequent disciplines Content (IFR) • Process equipment according to flow diagrams • Process lines and main utility lines with line sizes • Process measurement and main control functions • Battery limits for equipment packages and between different scopes • Utility distribution and reagent area diagrams not included at this stage Content (AFD) • Process equipment according to flow diagrams • All lines with line sizes and pipe specification • Process measurement and main control functions • Sources of interlocks and alarms (no interlock funtionality lines) • Battery limits for equipment packages and between different scopes • Designations of pipes and instrumentation • 3rd party equipment with typical content or black box for package internals

List of Utilities and Consumables shall be included in Lot 1. This document is related with BOP equipment capacity and line size. If is part of Lot 2, the final consumption can't be reflected to BoP equipment and piping design.

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

M - PLANT ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	
PLOT PLAN	MLD04	IFA	AFD			Purpose • Representation of the location and space reservation of the plant units defining the footprint of the plant Content • Location of plant units and/or plant areas, buildings/works, and principal outdoor process equipment • Connections between different plant units, main material flows and functional dependencies considered
PLANT LAYOUT	MLD05				AFD	Purpose • Representation of the Layout of one plant process unit considering connections between equipment material flows, functional dependencies, safety and maintenance aspects Content • The Plant Layout drawing represents the complete plant unit equipment with tag numbers • Buildings with main dimensions, location and space requirements for electrical, automation and control rooms • Stairs, lifts and passages • The content adheres to content of the plot plan • Section drawings have the same information as in plan drawing including elevations of the main platforms and main equipment
BATTERY LIMIT DRAWING	MLD08	PRE		AFD		Purpose • Overview of the location of transfer and/or take-in and take-out (TIP / TOP) points for materials, energy and signals at the battery limits. Content • Take-in and take-out point location relative to process equipment, buildings, pipe racks and other plant units • Take-in and take-out point designation • Indication of the take-in and take-out point location • Information on the type of take-in and take-out point connections • Information of the take-in and take-out points can be defined on the drawing or on a separate list • Information on interface responsibilities
[HAZARDOUS AREA PLAN] The hazardous area classification for items within the Process Area that are under the OSBL Contractor's scope is required to support FEED engineering and quantity take-off (MTO) activities. Therefore, the relevant information shall be provided in Lot 1.						
** HAZARDOUS AREA PLAN	MLD11			IFI	AFD	Purpose • Identification of potential explosive atmospheric conditions in plant Content • Determination of flammable gases and combustible dusts and the likelihood of occurrence in plant • Hazardous area plan indicating different hazardous area zones in plant
3D VISUALIZATION MODEL	MTB04	IFI	IFA	IFR	AFD	Purpose • The 3D Model enables the integrated work of all engineering disciplines to ensure the quality during project execution. It is a basis for the creation of the relevant engineering documentation. A simplified, digital representation of components of the plant. Content (IFI, IFA) • Projects all 3D models are integrated into one viewer (e.g. Navis Works) document • Location and simplified form of process equipment • Terrain is considered during the plant 3D modelling (topography information received in editable format from Customer) • Main equipment supporting structures (indicative) • Main building structures (indicative) • Gridlines and equipment labeling • North side of plant and orientation of the coordinate axes, +Y axis= Plant North, +X axis = Plant East • Definition of the zero point of the plant, indicated by a ball Content (IFR, AFD) • Projects all 3D models are integrated into one viewer (e.g. Navis Works) document • Process equipment • Escape and access routes • Maintenance areas and paths • Process pipes equal and above DN100, modelled to specification • Process critical pipes (TBD by Metso) of less than DN100
The native 3D model files are required to verify component properties and cross-check the model data against the prepared piping MTO.						

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

							• Slurry samplers and sampler pipe routing • Main inline instruments and valves • Main cable tray routing • Main equipment supporting structures pre-calculated • Main building structures pre-calculated • Gridlines and equipment labeling • North side of plant and orientation of the coordinate axes, +Y axis= Plant North, +X axis = Plant East • Definition of the zero point of the plant, indicated by a ball
M - MECHANICAL ENGINEERING			Lot 1	Lot 2	Lot 3	Lot 2	
*	DUTY SPECIFICATION OF MAIN PROPRIETARY EQUIPMENT	MEC07			AFD		Purpose • Duty Specification provides information about Metso -designed main equipment such as crushers, mills, flotation cells, thickeners, filters, agitated tanks, reactors and autoclaves. Content • Duty of the equipment • Relevant charasteristics of the equipment • Depending on the equipment, either specification or datasheet is included in the scope.
*	DATA SHEET OF MAIN PROPRIETARY EQUIPMENT	MDA01			AFD		Purpose • Data sheet provides information about Metso -designed main equipment such as crushers, mills, flotation cells, thickeners, filters, agitated tanks, reactors and autoclaves. Content • Relevant characteristics of the equipment • Depending on the equipment, either specification or datasheet is included in the scope.
*	MAIN PROPRIETARY EQUIPMENT GENERAL ARRANGEMENT DRAWING	MTL03			AFD		Purpose • Equipment general arrangement drawing provides information for plant design and customer about Metso -designed main equipment such as crushers, mills, flotation cells, thickeners, filters, agitated tanks, reactors and autoclaves. Content • Exterior shape of an equipment, main dimensions, main nozzle connections and the location of the connections.
	DUTY SPECIFICATION OF MAIN NON-PRORPIETARY EQUIPMENT	MEC07			AFD		Purpose • Duty Specification defines the essential requirements for equipment and can be used for equipment inquiry. Content • Duty of the equipment. • Essential requirements for the equipment • Depending on the equipment, either specification or datasheet is included in the scope.
	DATA SHEET OF MAIN NON-PRORPIETARY EQUIPMENT	MDA01			AFD		Purpose • Data Sheet is prepared on equipment specific template and can be used for equipment inquiry. Content • Essential requirements for the equipment • Depending on the equipment, either specification or datasheet is included in the scope.
Data Sheet of 'Client scope' equipment shall be submitted as Lot 1							
	OUTLINE DRAWING OF MAIN NON-PROPRIETARY EQUIPMENT	MTA01			AFD		Purpose • Outline Drawing provides initial information for detailed design of 3rd party equipment designed specifically to the project. Such as tanks and non-proprietary launders. • Outline Drawings can be also used in inquiry of the equipment as an appendix to Technical Specification Content • Outline drawing describes the exterior shape of an equipment, main dimensions, main nozzle connections and the location of the connections • Outline drawing is not provided for 3rd party standard or customized equipment in basic engineering • Outline drawings are prepared only for process performance -related equipment
M - PIPING ENGINEERING			Lot 1	Lot 2	Lot 3	Lot 4	
**	PIPING CODES PROCEDURE	MDB01	AFD				Purpose • To define formation of numbering pipelines, valves and fittings. Content • Numbering system for pipelines, valves and fittings

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

**	PIPING INDEX	MEC11	IFA	AFD			Purpose • Piping index defines the operating conditions, general material requirements and required pipe size range for each fluid in process. It is the basis for selection and creation of different pipe classes for Project. Content • Fluid designation • Piping material • Estimated range of line sizes • Required design pressure • Required design temperature
**	PIPING DESIGN GUIDE	MEC10		IFR	AFD		Purpose • The piping design guide comprises of the definitions of piping design. • The initial data of the process and plant engineering services will be the basis of the piping design. Content • General instructions used in piping engineering
**	PIPE CLASS SPECIFICATION	MEC09		IFR	AFD		Purpose • Pipe class specification is used as basis for 3D modelling of piping. It defines piping components used in modelling and later extracted to Preliminary Piping Material Take Offs used for inquiry of piping. Content • Pipe class specification includes information about all standard pipe components such as pipe, fitting, flange, bolting and gasket needed available in each pipe class.
	PIPELINE LIST	MMB01			AFD		Purpose • Pipeline List provides a summary list of all pipelines in P&I-diagrams with basic information. Depending on the project phase the list can be used as support material for cost estimation and progress reporting for inquiries of materials or piping installation. Content • Pipeline identifier or Pipeline label as per pipe coding procedure • Nominal diameter and nominal pressure • Fluid code and fluid description • Pipeline special feature code as per pipe coding procedure (insulation, tracing etc information) • Starting and ending point of the piping • Required design temperature and pressure • Pertinent P&I diagram
	VALVE LIST	MMB02			AFD		Purpose • Valve List provides a summary list and short description of all valves in PI-diagrams. Depending on the project phase the list can be used as basis for cost estimation and progress reporting for inquiries of materials or piping installation. Content • Valve designation and/or item number • Valve type • Location of valve (pipeline or equipment) • Pertinent P&I diagram • Fluid code and fluid description • Nominal diameter of valve • Material/pipe spec
**	PIPING MATERIAL TAKE OFF - PRELIMINARY	MPA03			IFI		Purpose • Piping Material Take off lists contains information of piping materials. After basic engineering, a preliminary list of main process piping can be extracted from 3D model. Small bore piping will be estimated. List can be used as support material for cost estimation or for inquiries of materials or piping installation. Content • Part Description • Dimensions Standard • Material Standard • Quantity [pcs/m]

The native 3D model files are required to verify component properties and cross-check the model data against the piping MTO. The piping MTO shall also be provided in spreadsheet format.

E - ELECTRICAL ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

EIA CODES PROCEDURE	EDB03	AFD				Purpose • Defines the coding format of electrification, instrumentation and automation equipment. Content • Formation instruction of the code • Applications of the code
LIST OF ELECTRICAL CONSUMERS	EEC09		IFR	AFD		Purpose • Enclosure to switchgear inquiries • Basic information for layout and circuit design of electrification Content • Consumer tag number and name • Rated voltage • Rated power • Starter/feeder types • Normal or standby • Emergency power • Feeding switchgear
MAIN SINGLE-LINE DIAGRAM	EFA04		IFR	AFD		Purpose • Enclosure to inquiries • Cost estimate of electrification • General overview of distribution Content • Principles of power supply, emergency power supply and stand-by connections of the plant • Main electrical equipment (LV consumers are not shown) • Rated currents and short-circuit values of substation, switchgears and MCCs • Rated powers, voltages, vector groups and short-circuit impedances of transformers • Rated powers of generators, medium voltage motors, capacitors and reactors • Tag numbers of the main equipment (transformers, generators, switchgears, etc.)
TYPICAL SCHEMATIC DIAGRAMS	EED15			AFD		Purpose • Basic information for detailed circuit and control design • Inquiries of LV-switchgears Content • Typical diagrams including direct and frequency converter starters • Main circuits and control, measuring and interlocking circuits of motors • Motor control philosophy
SHORT-CIRCUIT CALCULATION	EED03			AFD		Purpose • Theoretical calculation basis for electrical network design and selection of high, medium voltage distribution components Content • Short-circuit current calculation • High and medium voltage switchgears
BILL OF MATERIAL - PRELIMINARY	EPA01			IFI		Purpose • Defines material for installation • Enclosure to inquiries Content • Cables • Cable trays • Protection conduits • Safety switches • Local control switches • Earthing material
E - INSTRUMENTATION ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	

[LIST OF ELECTRICAL CONSUMERS]
According to the Metso Milestones, the IFR shall be provided as part of Lot 1. Especially, it is required as soon as possible for Power Plant design.

[MAIN SINGLE LINE DIAGRAM]
According to the Metso Milestones, the IFR shall be provided as part of Lot 1.

[TYPICAL SCHEMATIC DIAGRAM]
The schematic diagrams for equipment designed by Metso and procured by the OSBL Contractor shall be provided in Lot 1 to enable the preparation of inquiries and cost estimation by the OSBL Contractor.

[BILL OF MATERIAL - PRELIMINARY]
Items designed by Metso and installed or supplied by the OSBL Contractor shall be provided in Lot 1 to enable the OSBL Contractor to estimate material and construction costs.

[OTHERS FOR ELECTRICAL]
The following information and/or deliverables for items designed by Metso and procured and installed by the OSBL Contractor shall be provided in Lot 1.
* Electrical equipment list with rating and dimension data
* Electrical equipment data sheet
* Electrical equipment specification
* Electrical cabling and cable tray design information
* Electrical heat tracing information
* Electrical cathodic protection informaiton (if required)

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

SPECIFICATION OF FIELD INSTRUMENTATION	EEC02		AFD			Purpose • General technical specification of field instruments Content • Main design principles, solutions and requirements for measurement and control equipment • Description of instruments by function
INSTRUMENT LIST	EPC06		IFI	AFD		Purpose • General specification of field instruments indicated on the P&I diagrams with I/O count Content • Revision • Loop tag • Instrument tag • Loop name / service / description (recommended max 33 marks) • Process equipment / pipe number • P&ID reference • Instrument type • Supplier (Scope of supply) • I/O type
E - AUTOMATION ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	
PROCESS CONTROL SYSTEM (PCS) DIAGRAM	EFA01		IFR	AFD		Purpose • Overview of the scope and technical structure of the Process Control System. Content • Covered process areas • Automation, control and electrical rooms • System stations • Cabinets and boxes • Network and buses • Analyzers • Expert systems • CCTV system
PROCESS CONTROL SYSTEM SPECIFICATION	EEC05			AFD		Purpose • General technical specification of the Process Control System. Describes the parts shown in the Process Control System Diagram. Content • Description of the PCS diagram • System stations by type • Networks and buses by type • A brief introduction to Metso special automation equipment connected to the Process Control System
SPECIFICATION OF AUTOMATION ROOMS	EEC07			IFI		Purpose • Special requirements for automation and control rooms. Content • Size • Construction and material • Temperature, humidity and air quality requirements • Vibration requirements • Lighting and noise requirements
C - CIVIL AND STRUCTURAL ENGINEERING		Lot 1	Lot 2	Lot 3	Lot 4	

© 2026 Metso

CONFIDENTIAL CONTENT - Not to be shared externally without formal consent from all parties included.

	STRUCTURAL ENGINEERING DESIGN CRITERIA	CEC03	IFA	AFD			Purpose • This document establishes the criteria for structural engineering and design in order to ensure uniformity and consistency of the design. Content • The document describes the minimum technical requirements for the structural design of process industry facilities. • Designation of the systems, units or elements to be designed • Compilation of codes, standards and regulations to be complied with • Description of the site conditions • Principle demands on the design • Determination of the design loads • Determination of the load combinations • Determination of the design method • Determination of serviceability states to be considered • Specification of the minimum material characteristics and requirements • Determination of specific design requirements • Compilation of reference project documents
	3D MODEL (PRELIMINARY FOR CONCRETE FOUNDATIONS)	CTB21				IFI	Purpose • A 3D model of concrete surface foundations, to improve layout development and to avoid clashes between items such as steel structures, piping, equipment, cable-trays. In addition it simplifies and creates confidence in the reviewing process. Content • Outlines of the surface foundation structures and its main components
	LOADING DIAGRAM, PRELIMINARY FOR FOUNDATION	CTA06				AFD	Purpose • Provide preliminary load information for the foundation estimation. The representation consists of a plan view drawn generally to scale. Content • Plan view of the building and/or structures • Orientation, designation and spacing of the axes of the building and/or structures • Location and designation of the points of action of load • Magnitude and direction of static and dynamic loads for each load case and support • Location and area of distributed loads • Representation of the coordinate system and positive/negative designation for loads • Load data will be released in a separate document with indication to drawing
**	BILL OF QUANTITY FOR STEEL STRUCTURE - PRELIMINARY	CPA03			IFI		Purpose • A bill of quantities (BoQ) provides the basis for the capex estimation of Structural Steel supplies (not for execution) Content • Quantities and material types of the steel structures with units for each building and/or structure for steel, flooring, railing, cladding, stair steps • Quantities in kg/tons for steel weight specifying light, medium, heavy or buildup sections • Quantities in m² for flooring specifying grating type, checkered plate, diamond plate, Fiber Reinforced Polymer • Quantities in kg for railing • Quantities in m² for cladding specifying insulated, uninsulated, roof and facade • Quantities in pieces for stair steps specifying type and dimension

Preliminary GA drawings of ISBL buildings and technological structures (Lot1)

* Required during the early stage of Phase 1 to establish the basis for the cost estimate by identifying substantive differences from the applicable MMGP as-built information and assessing the resulting impact on installation and construction costs. As a minimum, sufficient information shall be provided to support this assessment.
